Zero Emissions

Zero Emission
Electro-Hydraulic Actuator Solutions

SYM EH

- For quarter turn valves
- Ideal actuation solution for zero methane or VOC emission requirements for ESD valves
- Available in spring return or double acting configurations
- Includes flange mounting directly to valve or custom adaption to valve when direct mount not possible
- Includes motor protection circuit from external power surges or overheating
- Available for Class 1 Division 1 hazardous areas (consult factory for other hazardous area classification requirements)
- Compatible with all typically available power sources: 480VAC, 240VAC, 120VAC, 24VDC, solar options available for remote locations

Linear EH

- For rising stem valves such as gate valves, globe valves, and choke valves
- Ideal solution for zero methane or VOC emission requirements ESD gate valves or flow control valves
- Self-contained control system for ON/OFF or modulating service
- Includes custom adaption to existing valves or can be directly flange mounted to bare stem valves
- Available for Class 1 Division 1 hazardous areas (consult factory for other hazardous area classification requirements)
- Compatible with all typically available power sources: 480VAC, 240VAC, 120VAC, 24VDC, solar options available for remote locations

Skid-Mounted Hydraulic Power Units

- Custom designed skids for special applications
- Designed to provide power to either a single hydraulic actuators or multiple actuators at the same location
- Can include emergency fluid power storage for ESD scenarios where a spring is not cost effective
- Local control panel with optional PLC logic to integrate directly to field controls
- Ideal option for applications with large volume requirements and high-speed operation
- Can be integrated with solar panels for complete remote power solutions
